ACCELERATE YOUR JOURNEY TO S/4HANA WITH HPE & BCX

Benefits of migrating to SAP S/4HANA

The decision to adopt SAP S/4HANA is not a simple one. It requires deep thought, intensive assessments, and a careful evaluation of the benefits your organisation can leverage to stay ahead of the digitisation curve and compete in today's business environment. If done correctly, there are six major benefits to migrating to SAP S/4HANA, these are:

Simplification

SAP S/4HANA introduces a healthy dose of simplification to management and administration of the IT landscape. SAP S/4HANA enables centralisation of hardware and network resources. Therefore, it is the digital core for business process simplification with the power of the SAP HANA in-memory database. With SAP ECC and older versions, enterprises often face issues of multiple batch-run dependencies. However, with SAP S/4HANA, you benefit from the elimination of aggregate tables and reduced processing time. In addition, your systems can easily respond to transactions and queries. All this ensures that you can spend your efforts on strategic growth efforts.

Performance

SAP S/4HANA offers improved performance. It allows clients to plan, execute, and generate reports & analytics based on live data. It allows for trigger period closings, provides improved predictions, and enables organisations to provide better service for customer-centric applications. The ever-so powerful SAP HANA offers increased contextual awareness and democratised data access.

Innovation

SAP S/4HANA sets the stage for future innovation. Applications built on SAP S/4HANA applications leverage speed, context and data accessibility like never before. In addition, SAP S/4HANA drives cloud adoption, enabling organisations to rapidly deploy innovative solutions and widen the capabilities offered by SAP S/4HANA.

Cost-Effectiveness

Adopting SAP S/4HANA is a smart move, as far as cost efficiency is considered. It brings together the analytical and transactional capabilities of a plethora of systems onto one location. This enables better and informed decision-making, based on real time data which can help businesses drive better ROI.

Usability

SAP Fiori provides a modern design for a completely innovative user experience. It enables users to easily access Overview Pages, Work Lists and List Reports. SAP Fiori's UI is designed to be highly intuitive, personalised, responsive, and simple. Users can prompt questions and access required details, regardless of the device or mode of deployment. It Allows organisations to evolve and drive new revenues, connect with customers at a deeper level, access IoT and Big Data and, most importantly, gain relevant insights into any data, in real-time. Hence, organisations can make decisions faster, a factor which is crucial for enterprises in the current digital age.

Easy transition from on-premise to cloud

A major benefit of adopting SAP S/4HANA is that it offers an easy transition to the cloud. Once adopted, SAP S/4HANA allows a move to the cloud to happen at any time, which is an important benefit for business leaders to consider.
